

# Delivery guide for MistaLifta

We operate 2 swinglifts (side loaders). They both lift straight over the drivers' side of the truck and only reach up to about 1 metre. Most customers are amazed at how big they are when we are manoeuvring down their driveway. They are maximum dimension street machines and are not made for

cross-country expeditions. Our drivers will do their very best to deliver your container onto your site, and if conditions allow, they will place it exactly where you want it.

## Access

Gateways must be at least 3.5 metres wide, or double that if we need to turn into them, unless they are angled or set well back.

Trees must be trimmed well back. We need a space at least 6 metres wide to lift/drop the container.

**Our mini-lifters are quite manoeuvrable but can only lift 20 footers (6 metres) up to 10 tonnes if the weight is spread evenly – not all at one end or on one side.**

Please consider your access and container size before you buy or hire a container.

We will not cross any bridges unless we have full confidence it will support our loaded weight.

## Placement

We cannot operate under powerlines or on hills and generally cannot lift over fences.

Have your preferred location for the container clearly marked and if you want it on blocks, have them ready – 150x50mm timber blocks are a

handy size (6x2) and a few thinner bits to level it up so the doors function correctly. Porous concrete blocks normally crumble under the weight.

Our drivers will lower the container close to the ground, then signal when it is safe for you to approach and place the blocks if they need moving.

Please stay at least 6 metres away from the working swing lift and stay where the driver can see you at all times.

Think about which way you would like the container doors to face and let us know to load it doors to cab or doors to rear. (Remember it only loads/unloads to the drivers side)

# Safety guide for Mistalifta

## Modified Containers

- ▶ Must be secure – doors and windows locked
- ▶ Roof must be secure and suitable for road transport
- ▶ Anything protruding from the ends of the containers will probably be damaged by our cranes

## Additional charges may apply

- ▶ If we have to wait while you trim trees so we can get in
- ▶ If we have to wait while you find keys to move a car or things in the way
- ▶ Towing, if you ask us to go in to a marginal access site and we get stuck. Our mini lifters are nearly 20 tonnes – your 4WD Ute will not tow them
- ▶ Extra mileage if we cannot deliver it as arranged and have to return at a later time.

We are happy to come and check your site where it is reasonably possible.

If we need to turn tight corners our axles may scuff your lawn/driveway.

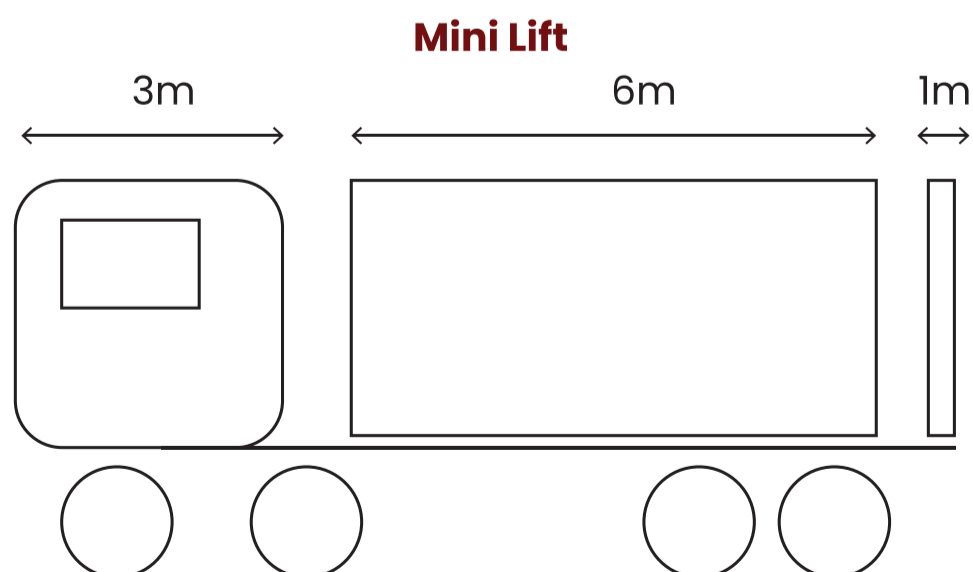

If we need to drive over your curbing it may break. Place boards each side to spread the weight.

## Personal Safety

- ▶ Please tell the driver of any soft ground, septic tanks etc near the lift site

- ▶ Please stay 6 metres away from the lifter
- ▶ Please always stay where the driver can see you
- ▶ Please do not be tempted to push the container – just signal the driver
- ▶ Please do not be tempted to duck in and move blocks while the lifter is operating – fingers do not grow back

Please make sure all dogs are tied up or locked up. Even friendly dogs are at risk and can be distracting.
